L2: Entry 25 of 49

File: USPT

Aug 23, 1988

DOCUMENT-IDENTIFIER: US 4766015 A

TITLE: Phospholipid lubricant for coating moving webs

## DEPR:

Other embodiments are within the following claims. For example, the phospholipid lubricant may be applied to the paper separately from the coating; e.g., the lubricant may be sprayed onto the moving web to alleviate sticking, picking or dusting.

File: USPT

Oct 26, 1999

DOCUMENT-IDENTIFIER: US 5972358 A  
TITLE: Low tack lotion, gels and creams

## DEPR:

Formulations 2, 3 and 4 were found to be non-tacky when used with alcohol mixtures, essential oils such as Australian tea tree oil, and phospholipid. This example demonstrates that the tack reducing composition is effective in the presence of emollients, moisturizers and high-boiling solvents, such as iso-propyl alcohol and n-propyl alcohol, and when used at various concentrations.

L2: Entry 24 of 49

File: USPT

Jan 24, 1989

DOCUMENT-IDENTIFIER: US 4800076 A  
TITLE: Skin care compositions

**BSPR:**

A soft, supple and flexible skin has a marked cosmetic appeal and is an attribute of normal functioning epidermis. The outer layer of the epidermis, the stratum corneum, can, however, become dry and flaky following exposure to adverse climatic conditions or excessive contact with detergents or solvents which result in the loss of skin moisturization with the further result that the skin loses its soft, supple and flexible characteristics. Various emollients such as fats, phospholipids and sterols have been utilized in various products to soften dry skin with varying degrees of success. Many of these products in lotion, cream or anhydrous format have not been perceived as cosmetically elegant by the consumer. The term "cosmetically elegant" can be used to describe a product which is attractively appearing, is non-greasy, non-tacky, has good skin feel, is spreadable and smooth.

L2: Entry 30 of 49

File: USPT

Feb 5, 1985

DOCUMENT-IDENTIFIER: US 4497157 A

TITLE: Process for filling pharmaceutical products containing phospholipides and highly viscous at room temperature, into hard capsules

## BSPR:

Drugs preferably are used in solid form such as powders, pellets, tablets or capsules since in these forms it is simple to exactly dose the products and to safely administer them perorally. However, due to their physical properties such as low flowability and their being oily and tacky products, it is difficult to convert the phospholipide into solid drug materials. These products therefor have to be admixed with the necessary additives and solvents in order to allow administration in the form of solutions, emulsions or suspensions. Since however products in the form of concentrated solutions, emulsions or suspensions cannot be dosed so exactly and are not as stable, they are less suitable then the solid dosage forms. It is therefor highly desirable to convert phospholipid containing products into a solid dosage form, for instance capsules.
